PROFILE SUMMARY

Computer Science student at Bina Nusantara University (Semester 5; GPA 3.7/4.0) with hands-on experience building web applications and Discord automation tools. Developed and maintained internal tools for a community of 1,835 members, including moderation, ticketing, talent operations, and payment tracking workflows. Interested in software engineering, IT business analysis, and DevOps, and available for an internship starting January–February 2027.

PROFESSIONAL EXPERIENCE

Programmer / Developer — Cosplay Thieves Community
Jan 2026 – Present

- Own technology delivery across community bots and website systems, translating operational needs into technical improvements and advising on future development priorities.
- Develop and maintain two Discord.js v14 bots used by a community of 1,835 members: OfficerBot for roles, tickets, moderation, onboarding, and safety; MediaBot for talent/streamer dashboards, social media monitoring, and payment tracking.
- Implement OfficerBot scam detection with batch message removal, rate-limit safeguards, user DMs, and logging; handle edge cases such as attachment-only messages and false positives.
- Continue development of the CT website and internal dashboard, including landing, talent, about, and clipper pages. Current dashboard stack includes Next.js 15, TypeScript, PostgreSQL 16, Prisma, NextAuth v5, and Tailwind CSS 4; contributions span the later website and dashboard development, following initial work by an R&D partner.
- Internal tools support 2 talents and 37 staff. Integrations and tooling include MySQL, Google Sheets, Google Drive API, Discord, GitHub API, PM2, and Docker, as applicable across the systems.

Freelance Teaching Assistant (Swift) — Global Solutindo
Nov 2025 – Sep 2026 · Project-based

- Supported approximately 30 teachers in understanding Swift syntax and fundamentals during a September 2026 session.
- Guided 20+ workshop participants across sessions from November 2025 to January 2026, helping troubleshoot and debug code during hands-on activities.

Independent Project Manager — Self-employed
Oct 2025 – Jul 2026

- Built and launched a digital school yearbook website for approximately 90 students using HTML, CSS, and JavaScript, handling planning, UI/UX, and deployment on Vercel.
- Led a six-person graduation-event team covering a mini studio booth, documentation, crew and photographer scheduling, and visual-asset quality control.
- Managed client communication, contract negotiation, budgeting, and risk planning.

SELECTED PROJECTS

CT Dashboard & Website | Next.js 15, TypeScript, PostgreSQL, Prisma, NextAuth, Tailwind CSS, Docker
https://cosplaythieves.com

- Developed website pages and continued the internal dashboard, supporting streaming reports, KPIs, monthly Excel exports, incident/moderation and attendance records, divisional finance and budgets, talent management, inter-department chat, announcements, notifications, audit logs, and clipper payment quality control.
- Implemented or maintained role-based access, JWT sessions, bcrypt password hashing, and brute-force protection using rate limits and temporary lockouts as part of the system.

OfficerBot & MediaBot | Node.js, Discord.js v14, MySQL, Google Sheets, PM2

- OfficerBot: server roles, ticketing, moderation, onboarding, safety filters, suggestion/complaint panels, and scam-trap automation; used daily by the community.
- MediaBot: interactive talent/streamer dashboard for modstream operations, social-media monitoring, and payment tracking; internal tool used by 2 talents and 37 staff.

MapScore | Next.js, TypeScript, PostgreSQL
https://map-score.vercel.app/

- Built a web application concept aimed at making affordable SEO recommendations accessible to small and medium-sized businesses, helping local businesses improve online exposure.
- Worked on the project independently after teammates left the work, covering the overall project implementation. The main feature is AI-assisted recommendations for improving exposure.

Growth Forecaster | Python, scikit-learn, Random Forest Classifier
https://github.com/Vy-ak/Artificial-Intelligence

- Cleaned data, trained the model, and built the website for a nutritional-status prediction project using age in months, height in centimeters, and sex as inputs.
- Trained and evaluated on approximately 121,000 records using an 80/20 train-test split; reported test accuracy was 99.91%. Because labels may follow fixed dataset rules, this metric should not be interpreted as evidence of clinical validity.

Digital School Yearbook | HTML, CSS, JavaScript, Vercel

- Designed, built, and deployed a private digital yearbook website for approximately 90 students, including distinct visual sub-themes for each class.

EDUCATION

Bina Nusantara University — Bachelor's Degree in Computer Science · Sep 2024 – Present · Semester 5 · GPA: 3.7/4.0

SMAN 2 Kota Tangerang — Science (IPA) · Jul 2021 – Jul 2024

LEADERSHIP & ACTIVITIES

Learning & Training Staff — Bina Nusantara Computer Club (BNCC) · Mar 2026 – Present

- Help keep classes aligned with industry needs by revising learning modules, presentations, and curriculum; support UI/UX Design classes and monitor instructor and participant follow-through.

Event & Logistics Coordinator (Tech Up) — Bina Nusantara Computer Club · Feb 2026 – Jun 2026

- Coordinated event planning, schedules, on-day execution, and equipment inventory.

Head of Programming Division — IT Club, SMAN 2 Kota Tangerang · Sep 2022 – Oct 2023

- Led programming learning from basic algorithms to website development; represented the school at district level in the National Science Olympiad (OSN), Informatics.

TECHNICAL SKILLS

Programming: JavaScript, TypeScript, Python, C, SQL, HTML, CSS
Frameworks & Tools: Next.js, React, Node.js, Discord.js, Tailwind CSS, Git, GitHub, Vercel, Docker, PM2
Databases & Integrations: MySQL, PostgreSQL, Prisma ORM, REST APIs, Google Sheets API, Google Drive API
Additional: Data cleaning, scikit-learn, UI/UX Design, project coordination
